

# Comp 484 Final Project Presentation

BY REID WALZ

# Problem

- ▶ Many job listing websites such as Craigslist can be either too dull, or overcomplicated for the services that they provide.
- ▶ Many people looking for a job don't have time to waste looking around town or the internet for a potential offer.
- ▶ With technology becoming more prominent we need a better solution for those doing job searches online, whether that be at home or on the go (mobile phones)

# Motivation

- ▶ I find this specific problem interesting because with the increased rate of unemployment, you would think there would be more alternatives for job searching.
- ▶ I believe that giving more people a chance to find a job can help change this statistic, and allow more private jobs to surface for those who don't have credentials such as a college degree.
- ▶ With a friendly UI for users to communicate to each other, I believe an excellent alternative to most job listing websites can be created.

# Approach

- ▶ HTML
- ▶ CSS
- ▶ JAVASCRIPT
- ▶ PHP
- ▶ XAMPP (APACHE AND MySQL)
- ▶ W3.CSS framework

# Results

► DEMO

# Future Work (by 12/8)

- ▶ Fully Working Front-Backend Page Generation for Listings
- ▶ User Creation and Login
- ▶ Clean UI/CSS
- ▶ Complete Mobile View

# Future Work (After 1st Submission)

- ▶ User Capabilities ( data link and saved searches )
- ▶ Advanced Search
- ▶ Comments Section
- ▶ Resume/Picture Uploader
- ▶ Location Services
- ▶ Mobile App ( video/voice call )
